DETAILED ACTION

1. This Office Action is in response to the applicant's amendment filed on 3/19/2009.

Response to Arguments

2. The following changes to the claims are acknowledged:
Claims 1-13 and 16-18 were amended by the applicant.

3. **35 USC 103(a) Rejection of claims 1-19**

Applicant's arguments, see page 8-12, filed 3/19/2009, with respect to the rejection(s) of claim(s) **1-19** under 35 USC § 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn

Examiner's Amendment

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Bradley Lytle, attorney of record for this application on 6/5/09.

The application has been amended as follows:

Claim 1 - in line 14, on page 2, “to the main body the opening in the stationary plate” has been changed to “to the main body, the opening in the stationary plate”

Claim 9 - in line 7, on page 5 “to the main body the opening in the stationary plate” has been changed to “to the main body, the opening in the stationary plate”.

Claim 9 - in line 4, on page 5 “those in the rotating plates at least partially overlapping” has been changed to “those in the rotating plates being arranged at least partially overlapping”.

Abstract – The abstract has been changed to remove the number references as follow:

There is provided a pivot hinge mechanism to support a main body (2) and grip unit (4) of a video camera pivotably in relation to each other. It includes a stationary plate (31) to be installed to one of the main body and grip unit, rotating plates (32, 33) to be installed to the other of the main body and grip unit, and a spindle (34) to support the rotating plates rotatably in relation to the stationary plate. The stationary plate and each of the rotating plates have formed therein a first and second openings (40, 54), respectively, through which a harness (66) routed between the main body and grip unit is penetrated. The first and second openings are formed to overlap each other at least partially in an angular range in which the grip unit is pivoted in relation to the main body.

Reasons for Allowance

5. Claims 1-19 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding independent claim 1 (Currently Amended), the prior art of record fails to teach or fairly suggest the highlighted limitation and the combination of all limitations required in the claim:

A pivot hinge mechanism supporting a main body and pivotable unit pivotably in relation to each other, the pivot hinge mechanism comprising:

a stationary plate attached to one of the main body and pivotable unit;
rotating plates attached to the other of the main body and pivotable unit; and
a spindle supporting the rotating plates rotatably about an axis of rotation in relation to the stationary plate,

the stationary and rotating plates including openings extending completely through the stationary and rotating plates in a direction parallel to the axis of rotation through which openings a harness routed between the main body and rotating portion passes; and

the opening in the stationary plate and those in the rotating plates being arranged at least partially overlapping each other in the direction parallel to the axis of rotation along an angular range in which the pivotable unit is pivoted in relation to the

Art Unit: 2622

main body, the opening in the stationary plate and those in the rotating plates being eccentric to the axis of rotation.

Regarding independent claim 9 (Currently Amended), the prior art of record fails to teach or fairly suggest the highlighted limitation and the combination of all limitations required in the claim:

An imaging device, comprising:

a main body including therein an imaging unit configured to capture an image of an object;

a grip unit including therein a recording unit to record the image captured by the imaging unit and installed pivotably to one side of the main body; and

a pivot hinge mechanism that supports the main body and pivotable unit pivotably in relation to each other,

the pivot hinge mechanism including a stationary plate attached to one of the main body and pivotable unit, rotating plates attached to the other of the main body and pivotable unit, and a spindle supporting the rotating plates rotatably in relation to the stationary plate about an axis of rotation,

the stationary and rotating plates including openings extending completely through the stationary and rotating plates in a direction parallel to the axis of rotation through which a harness routed between the main body and rotating portion is passed, and

the opening in the stationary plate and those in the rotating plates at least partially overlapping each other in the direction parallel to the axis of rotation along in an angular range in which the pivotable unit is pivoted in relation to the main body, the opening in the stationary plate and those in the rotating plates being eccentric to the axis of rotation.

Regarding claims 2-8 and 10-19, these claims depend on claims 1 and 9 respectively.
